

RT-3600

Roller Trunnions

Features

- Polyester powder coated for a durable, lasting finish
- Rigid, heavy duty construction
- Maintenance free

RT-3600

Description

The Eagle Microsystems ST-3600 is designed to allow the storage of chlorine, ammonia, sulfur dioxide and other gas cylinders while at the same time allowing the cylinders to be rotated in their storage spaces.

These trunnions are made from heavy duty castings which resist twisting and bending when installed on regular surfaces. The PET plastic rollers have stainless steel axles ensure ease of rotation for stored cylinders without greasing or other maintenance.

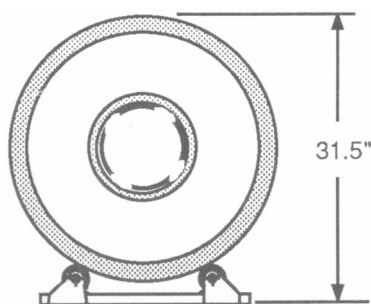

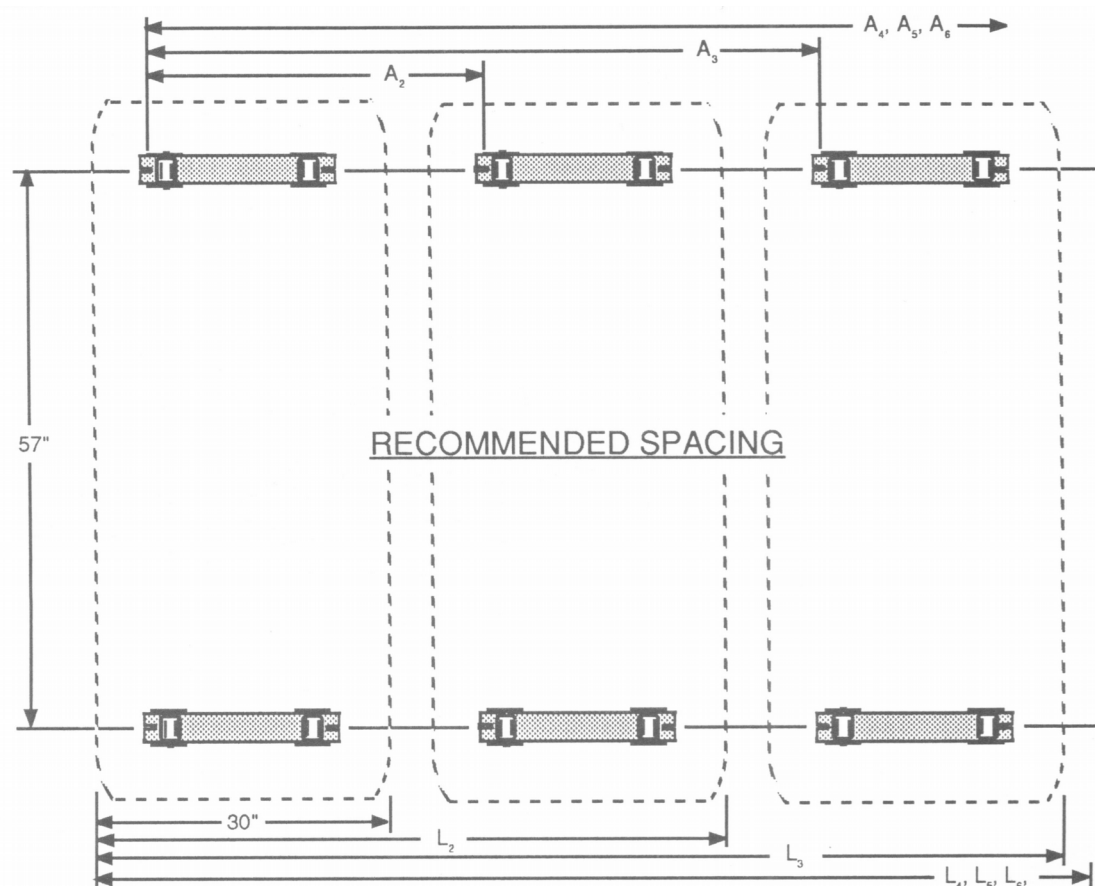

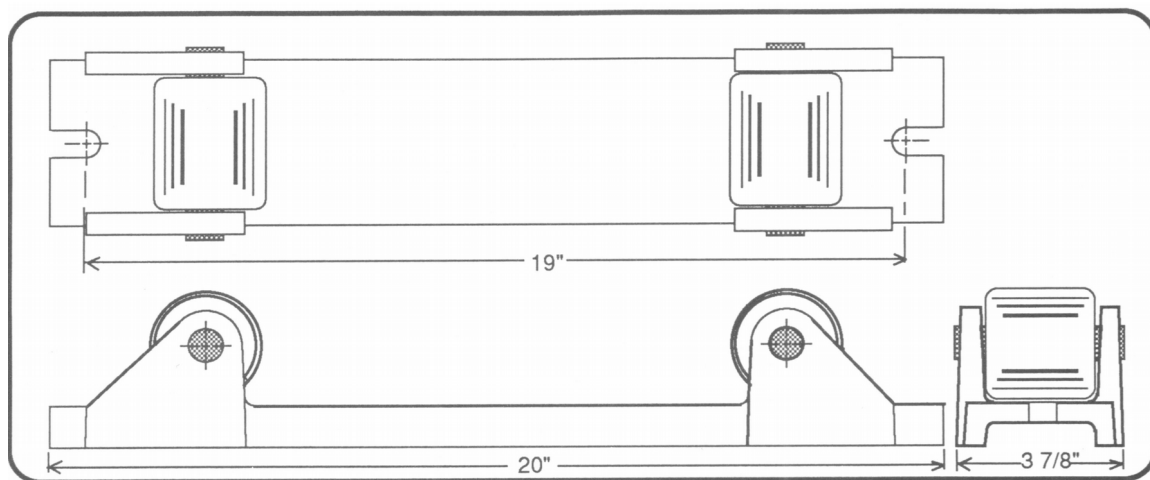

The RT-3600 has the same floor-print of the WT-3600 scale allowing installations to be upgraded in the future
