

# ST-3600

## Storage Trunnion

### Features

- Corrosion Resistant
- Safe Storage
- Maintenance free
- No sharp corners
- Easy insalation

ST-3600

### Description

Eagle Microsystems ST-3600 storage trunnions provide a safer method of storing chlorine cylinders compared to continuous rails. Unlike a continuous track, each cylinder is individually constrained. Optional safety straps are available for seismically active areas. These storage trunnions have smoothed cradles to prevent damage to the cylinders placed on them and offer greater flexibility in the layout of storage areas. They are finished with a polyester powder coat of paint.
